Consider support for French sovereign operating system #19396

① Open

ndeloof opened this issue on Jan 17 · 201 comments

ndeloof commented on Jan 17

French government announced, as part of "digital sovereignty" effort, to consider building a fresh new 100% French operating system - yes, just like North Korea does.
Would be great if we still can run docker on this OS.

AlexisNo commented 28 days ago

It is more common to use the English word "docker" than "débardeur" in French. Actually, I even didn't know that this word had this signification! Even [wikipedia name it "docker" in it's french version](#). For me, as a french guy, a "débardeur" is this:

And to truly translate commands from english to french, we should invert the order of words:

- `docker run => cours débardeur / démarre débardeur`
- `docker stop => arrête débardeur`
- `docker push => pousse débardeur`
- `docker pull => tire débardeur` could maybe be aliased as `déshabille` (undress)
- etc ...

brouberol commented 28 days ago

A common french synonym for "débardeur" is "marcel". For example, I propose to replace `docker push` par `pousse Marcel`.

It has a nice french ring to it, and is shorter to type.

ndeloof commented 28 days ago

"Marcel" definitively is an awesome translation for Docker. It even has same number of letters, so will help to adapt logos and documentation.

 **sieben** commented 28 days ago

 marcel: c'est pas sorcier :-)

![image](<https://cloud.githubusercontent.com/assets/300834/12517222/fbe263a2-c131-11e5-829a-643e3a06f506.png>)

xlucas commented 28 days ago

 Marcel sounds like an outstanding first step in the compliance process.

melix commented 28 days ago

+1 for Marcel. I can't wait to use `chauffe Marcel` in place of `docker run` !

quickmeme.com

(🐼) O'RLY?

stevedesmond-ca commented 28 days ago

Marcel could legitimately just be a separate cli app/script to route args to docker proper -- who will create this new project?

```
4 +"""
5 +Marcel is a french wrapper around the docker CLI, intended as a drop-in
6 +replacement in the french sovereign operating system.
7 +"""
8 +
9 +import re
10 +import subprocess
11 +import sys
12 +
13 +TRANSLATIONS = {
14 +     u'marcel': u'docker',
15 +     u'roule': u'run',
16 +     u'pousse': u'push',
17 +     u'tire': u'pull',
18 +     u'bûches': u'logs'
19 +}
20 +
21 +
22 +def clean_executable(command_chunks):
23 +     """Remove the ".py" suffix from the executable name, if found."""
24 +     command_chunks[0] = re.sub(r'\.py$', '', command_chunks[0])
25 +     return command_chunks
26 +
27 +
28 +def main():
29 +     command = sys.argv[:]
30 +     command = clean_executable(command)
31 +     command = [TRANSLATIONS.get(chunk, chunk) for chunk in command if chunk]
32 +     subprocess.call(command)
33 +
34 +if __name__ == '__main__':
35 +     main()
```

Codé et poussé dans un train en 5 minutes.

brouberol commented 28 days ago

@stevedesmond-ca I have created, per your request, a repo for marcel, with a tiny (but kinda fonctional in a broken way) wapper around docker: <https://github.com/brouberol/marcel>

Anyone, feel free to open PRs. I'll give write rights to every single person who either sends a PR or asks for it.

Let's change the world.

\(•◡•)/

@vdupain you type marcel perquisition

bankair commented 28 days ago

`Marcel tue`

dduportal commented 28 days ago

@bankair : Marcel MATUER

Thom-x commented 28 days ago

What about this logo :

jlevesy commented 28 days ago

@turb maybe some `docker-compose => marcel-et-son-orchestre` ?

jmMeessen commented 28 days ago

@ndeloof un épisode spécial pour "Quoi d neuf Docker" ?

ndeloof commented 28 days ago

@jmMeessen arrivé à ce stade, c'est clair !

Thom-x commented 28 days ago

Quoi de neuf Marcel ?

riespinasse commented 28 days ago

Marcel est déjà pris sur github, il faudrait une organisation pour regrouper les différentes implémentations déjà réalisées 😊

matthieudelaro commented 28 days ago

We could even update from LSE/LEM language to Swift since it handle any kind of character for variable names :) `marcel.faitGrève()`

Release early.

jefmathiot commented 27 days ago

Be kind and thankful.

leucos commented 27 days ago

Ce commit permet la déchéance d'exec, afin de pouvoir exécuter un processus souverainement dans un conteneur existant sans utiliser de barbarisme inutile.

Ajoute 'fait' pour remplacer le barbarisme 'exec' ...

@bnjbvr I think a patch to Docker's container name generator would be a very good idea.

- For *adjectives*, we should use the French language's exceptionally rich choice of synonyms for "annoying".
- For *nouns*, we should use the rich variety of names used to designate the rulers of France over centuries.

```
$ marcel ps
louis_ennuyant
louis_chiant
louis_emmerdant
louis_lourd
louis_saoulant
louis_agacant
